1. Is the Python Standard Library included with PyInputPlus?

   PyInputPlus is not a Python Standard Library and is not included in it.

2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?

   So that it has shorter name and will be easy to call when required.

3. How do you distinguish between inputInt() and inputFloat()?

   Inputint() function accepts and returns a integer value and inputfloat() accepts integer/float values and returns float value.

4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?

   We give min and max values in the function
   pyip.inputInt(min = 0, max =99)

5. What is transferred to the keyword arguments allowRegexes and blockRegexes?

   The allowRegexes and blockRegexes keyword arguments take a list of regular expression strings to determine what the PyInputPlus function will accept or reject as valid input.

6. If a blank input is entered three times, what does inputStr(limit=3) do?

   Blank values are not allowed.

   Blank values are not allowed.

   Blank values are not allowed.

7. If blank input is entered three times, what does inputStr(limit=3, default='hello') do?

   Blank values are not allowed.

   Blank values are not allowed.

   Blank values are not allowed.

   'hello'
